

LTS Pricing Calculator

Project overview — what it does, what's in it, and how it works

The LTS Pricing Calculator lets a customer work out exactly what LTS would cost them, on the spot, without waiting on a quote from the team. They pick the products they need, enter their trainee or staff numbers, and see live pricing across every contract term, an estimated annual cost with the confirmed price increase already factored in, and a comparison against what the same admin costs them today if they're doing it by hand.

This document walks through every part of it: the two products and how each is priced, how a customer builds an estimate, the "cost of NOT using LTS" comparison, and the smaller features around the edges (templates, saved estimates, FAQs, Excel export). It's written for the team, not developers, so it covers what each feature does and how the numbers work, without getting into code.

The landing screen — live cost estimate in the top bar, updates as soon as a product is added.

The two products

LTS currently sells two things through the calculator, priced completely differently from each other.

LTS Platform — priced by trainee count

This is the core product: the assessment and learner-tracking platform. It's priced per trainee, per month, and the rate depends on two things: how many trainees the firm has, and how long a contract they commit to.

Trainee counts fall into five brackets (1–29, 30–99, 100–249, 250–499, and 500+), and the published rate applies to the whole firm once they're in a bracket, not just the trainees above a threshold. Contract

length works the same way it does with most subscriptions: Pay-as-you-go costs the most per trainee, and locking in for longer (1, 2, or 3 years) brings the rate down. The 3-Year Contract is flagged as "Best value" and is what a new line defaults to.

Time Sheet — a flat rate per user

Time Sheet is a separate add-on for tracking staff time. It doesn't use the trainee brackets at all: it's one flat rate per Time Sheet user per month (currently R59.24), billed on top of the platform. A firm can use Time Sheet without the platform, or add it alongside, and the two are always shown and billed as separate lines.

The confirmed annual increase

LTS increases its rates once a year, on 1 April, by a confirmed 6.6%. The calculator's "Estimated Annual Cost" figure already accounts for this: it looks 12 months ahead from today and blends in the increase for whichever of those months fall after 1 April, so the number a customer sees is a realistic estimate of what they'll actually pay over the coming year, not just this month's rate times twelve.

LTS - Practical Experience and Learner Tracking Platform
The preferred electronic assessment solution for training offices
A web-based platform for managing trainee assessments, competency tracking and reporting — accessible anywhere, with no software to install and no per-user licensing fees.

- ✓ 24/7 web-based access — no installation, works on any device
- ✓ Full compliance with SAICA, CIMA, ACCA, IIA, Compliance Institute, SAIGA and SAIPA requirements
- ✓ Extensive reporting: outcome status, progress, score grid, moderator review reports
- ✓ Help desk support 07:00–19:00 on business days, 10:00–13:00 weekends & holidays
- ✓ 99.99% average uptime
- ✓ No licensing fees, no installation fees — only the ongoing per-trainee subscription
- ✓ Records retained for at least 5 years after a trainee is signed off

On average

R223.77

per Trainee / month, excl. VAT

Add to estimate

TS - Timesheet Tracking
Staff time tracking, billed separately from the assessment platform
A standalone module for logging and reporting staff time. Priced per timesheet user — flat, not per trainee, with no volume brackets.

- ✓ One flat rate per timesheet user, regardless of trainee count
- ✓ Billed separately from the LTS - Practical Experience and Learner Tracking Platform
- ✓ Same subscription model — no installation or licensing fees

R59.24

per Timesheet User / month, excl. VAT

Add to estimate

Both products as shown on the Products tab, with pricing wording for each.

Building an estimate

Once a customer adds a product, it becomes a line in their estimate. Each line has its own trainee or user count, and the platform line also has its own contract-term choice, so a customer can compare all four contract options side by side and see the saving each one represents against Pay-as-you-go before picking one.

A customer can add more than one line: for example, the platform at one contract term plus Time Sheet for a separate group of staff. Every line updates the running totals immediately, no page reload and no waiting.

Totals, VAT and next steps

The totals card at the bottom of the estimate always shows three figures: upfront cost (always R0, LTS charges no setup or installation fee), monthly cost, and the estimated annual cost described above. A toggle switches every price on the page between excluding and including VAT at 15%. From there, a customer can export the whole estimate to an Excel spreadsheet to keep or share, or the page offers a sign-up or contact link depending on whether they've settled on a contract term yet.

The "cost of NOT using LTS" comparison

This section exists to answer a question customers often have: is LTS actually worth it compared to just running things on spreadsheets and email? Instead of one generic figure, it breaks the manual admin work into four categories, based on where a training office's time actually goes, and lets the customer put in their own numbers for each.

- Learner & Training Programme Administration:** creating and updating learner records, Excel trackers, allocations, progress updates. Costed as trainee count × hours per trainee × an administrator's hourly cost.

- **Monitoring, Follow-Up & Exception Handling:** checking who's behind, chasing trainees and managers, escalating overdue items. Its own hours-per-month and hourly rate, separate from category 1.
- **Reporting, Status Updates & Compliance:** management and trainee status reports, compliance and audit information. Uses an L&D / Compliance hourly rate, since this work often falls to a different person than day-to-day admin.
- **Management Time & Ad-hoc Information Requests:** queries, reviewing progress, requesting information about the programme. Its own hours and a management hourly rate.

All eight numbers (four hours figures, four rates) are editable, with sensible defaults filled in. The trainee/employee count at the top of this section fills itself in from the estimate above (the platform's trainees plus any Time Sheet users), and keeps updating live as those change, right up until the customer types their own number into it directly.

1 Learner & Training Programme Administration Creating & updating learner records, Excel trackers, allocations, progress updates. Admin time / trainee / month (hours) 0.75	Administrator cost / hour (R) 220
2 Monitoring, Follow-Up & Exception Handling Checking who's behind, chasing trainees & managers, escalating overdue items. Hours / month 8	Administrator cost / hour (R) 220
3 Reporting, Status Updates & Compliance Management & trainee status reports, compliance & audit information. Hours / month 6	L&D / Compliance cost / hour (R) 280
4 Management Time & Ad-hoc Information Requests Queries, reviewing progress, requesting information about the programme. Hours / month 5	Management cost / hour (R) 450

All four categories, each with its own editable hours and rate.

The result is a straightforward side-by-side: what the same work costs done by hand each month, against what LTS costs the customer for the plan they've built, with the saving (or the trade-off, if LTS costs more) spelled out underneath in plain terms, including the hours of staff time it frees up.

These figures are your own estimates of manual effort, not LTS charges — they help show the time and money LTS saves. LTS costs above exclude VAT unless the toggle is on.

The side-by-side result and savings summary, shown below the four categories.

The rest of the calculator

Estimate templates

Five ready-made profiles (from a small new client through to a 500+ trainee enterprise firm) that pre-fill a trainee count and contract term, so a customer who isn't sure where to start can pick the closest match and adjust from there instead of building an estimate from nothing.

New Client — Small Firm Just switching to LTS or starting out. Flexible, no long-term commitment. 15 trainees · Pay-as-you-go R6,273.45 /month excl. VAT Use this template	Growing Firm A firm with a growing trainee intake, ready to lock in a better rate. 60 trainees · 1 Year Contract R17,195.40 /month excl. VAT Use this template	Established Training Office A firm with a steady trainee base looking for predictable costs. 150 trainees · 2 Year Contract R31,411.50 /month excl. VAT Use this template	Large Training Office Multiple offices or a large annual intake, committing for maximum savings. 350 trainees · 3 Year Contract R59,472.00 /month excl. VAT Use this template
Enterprise / National Firm 500+ trainees across regions — LTS's best available rate. 600 trainees · 3 Year Contract R96,564.00 /month excl. VAT Use this template			

Saved estimates

A customer can save an estimate and come back to it later on the same device. This is stored in the browser itself, not on an LTS server, so it's private to that customer's computer.

FAQs

A set of common questions grouped by topic, covering how to subscribe, what's included in the price, support hours and reliability, and which professional bodies LTS supports. Pulled from the same content source as everything else, so updating an answer is a one-line change.

Branding

The colour scheme (navy header and hero, teal-to-blue logo and accents) was updated to match the live LTS site, replacing the earlier blue-to-green palette. The layout and every feature described above stayed exactly the same through that change.

Where the project stands

The calculator has been through several rounds of your feedback, and the changes from each round are live in the current build: product wording, defaults, the escalation figure, the comparison rebuild described above, and the branding update. It's also been converted so the development team can drop it straight into the real LTS website. Both a standalone copy (to open directly in a browser) and the converted version are ready to hand over.
